

For those of you transitioning from the old Developers site, we have created the following FAQ.

**Q: Where is RTP documentation?**

RTP documentation is found underneath "JavaScript API" menu, where there are separate sub-menus for [Web Personalization](#) and [Predictive Content](#).

**Q: Where is the Munchkin documentation?**

Munchkin documentation is found underneath "JavaScript API" menu, where there is a sub-menu called [Lead Tracking](#).

**Q: Where is the Forms 2.0 documentation?**

Forms 2.0 documentation is found underneath "JavaScript API" menu, where there is a sub-menu called [Forms](#).

**Q: Where is the REST API endpoint reference documentation?**

REST API endpoint reference is found underneath "REST API" menu, where there is a sub-menu called [Endpoint Reference](#).

**Q: Why did REST API endpoint friendly names change?**

As part of the Swagger implementation, several friendly names for REST API endpoints changed. This has no impact on endpoint behavior or usage. We now simply use a different name when referencing the endpoint. For example, "Create/Update Leads" is now known as "Sync Leads". A comprehensive list of name changes can be found [here](#).

**Q: Where are the code samples?**

All of the code samples have been moved to [GitHub](#). Feel free to submit a pull request if you find bug, or would like to add more samples.
